

ALPHA HEATING AND SOLAR NZ LTD

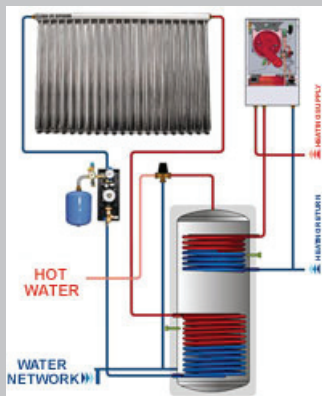

...THE "FERRARI" IN SOLAR WATER HEATING...

- Free Energy Source!
- Revolutionary Italian Design!
- Significant Savings!
- Great Investment for family and business!
- Simply the Best!

ALPHA SOLAR WATER HEATING
Clean...Green...and Affordable
www.kloben.it/en/
ph. 07 5712493

ALPHA SOLAR can be applied to:

- New and Existing Domestic Systems
- Commercial Heating
- Low pressure and Mains Pressure Domestic hot water system

Kloben is one of the few companies Europe-wide and the only one in Italy which produces vacuum solar collectors, able to guarantee a higher energy contribution also in conditions of low irradiation or low outside temperatures.

Does the COST OF POWER concern you?

The solar collector Kloben is formed by a series of borosilicate glass tubes in a double cavity, soldered at the extremes to create an internal vacuumous cavity. The internal cavity absorbs solar energy by utilising recycled products which are metallised with "CERMET". Reflective aluminium sheeting is fixed underneath the tubing which has low iridescence, and a total absorption factor > 90%.

Thanks to these characteristics, the fields of application are various - production of sanitary water, integration of heating systems, heating of pools and more.

How can Solar energy positively effect my family and environment?

- Of all energy sources, Solar energy produces the least amount of CO2 into the atmosphere
- Does not pollute the environment
- Protects our planet for future generations

ALPHA Solar evacuated tubes are strong enough to tolerate hail stones up to 25mm diameter.
