

Sustainability with DVS®

FP5

FUTURE-PROOF BUILDING

Future-Proof™ your family and home with the DVS® fresh air ventilation system.

The DVS® system gently ventilates your home with fresher, drier air, forcing out moisture-laden stale air caused by everyday living. Your home will be fresher and drier all year round, creating a healthier and more comfortable environment for your family.

The DVS® will:

Reduce costly and time-consuming repairs and maintenance in the future. For less than you may imagine, DVS® home ventilation will help protect your windows, curtains, wall coverings and furnishings from damage caused by condensation, dampness, mould and mildew.

Make your home more energy efficient - as less energy is required to heat a drier home than a damp one. On warm sunny days, even in winter, the DVS® can supplement your home heating by capturing any free solar heat from your roof space. The DVS® can also make more efficient use of existing heating by distributing

it more evenly throughout the home. DVS's energy efficient systems use only 20 – 25% of the power used by comparable conventional fans, with ongoing savings up to \$80 a year in an average sized home.

Protect your family's health by controlling and reducing condensation, mould, mildew and dust mites the DVS® will make your home drier, healthier and fresher, greatly improving indoor air quality. Plus, the DVS® will enhance your home security and personal safety by ventilating your home without the risk of opening doors and windows.

Save you space – With the main components mounted in the roof space, (or in cupboards or storage spaces in homes with no roof spaces) the DVS® is quiet and unobtrusive, with discreet ceiling outlets and attractive wall-mounted control panels. Space-saving home ventilation.

We are so confident about our products that we provide a Five Year Parts and Labour Warranty on all DVS® components.
